IN THE ABSTRACT OF THE DISCLOSURE

Please amend the Abstract of the Disclosure by rewriting same to read as follows.

-- (Amended) A movable body or vehicle management system which can appropriately calculate a movable body rental fee according to availability and flexibly and effectively allow movable bodies to be used. Each of the vehicles, such as cars and bicycles, has a GPS capability to detect its own current position at a specified time interval. The system transmits information indicating the detected current position to an operating company for managing current positions of respective vehicles. When each of the vehicles, such as bicycles, is rented out to a member and is used, the system starts measuring a traveling distance and a traveling time. When the use of the vehicle ends, the system transmits the measured traveling distance and traveling time to a server apparatus in the operating company. The operating company's server apparatus calculates the fee for settlement according to the transmitted traveling distance and traveling time.--
